

# TURKEY ALFALFA - بذور العلف التركية

## Fall Dormancy 6-7

## Alfalfa – Sun ( Coated Seed)

ALFALFA - *Medicago sativa* L.

Variety : **SUN**

- It is a high quality variety created by bringing together the characteristics of varieties having high quality values selected from a variety of naturally growing alfalfa variety in Anatolia.
- Due to its deep and strong root structure, the next rate of harvesting is high (22-25 Days).
- Appropriate harvesting time is -15 flowering period
- Sunter alfalfa is a high nutritional alfalfa variety and is a highly qualified forage plant because of its small woody part and branching distance.

Origin/Place of Production	Turkey
Dormancy group	6/7
Plant length	90-120 cm
Protein content (as bales)	% 17 - % 21
Fresh yielding for each cut	15.000-18.000 kg/ha
Dry yielding	6.500- 7.500 kg/ha
Resistance to winter	High
Sowing amount	50 -60 kg/ ha
Sowing depth	0,5 -1 cm
Color of flower	Purple
Resistance to diseases	High
